Demographic Outlook for British Columbia

HIGHLIGHTS

Provincial Perspective:

- British Columbia's population growth in the 1990s will exceed that of the 1980s - averaging around 1.9 percent per year over the next decade. On average, there will 64,000 more British Columbians each year through to 2000 and the age structure and regional distribution of the population will change significantly.

- There will be a net increase of 702,000 residents in British Columbia over the next decade. Approximately 87 percent of these new residents will be adults.

- Net-migration is forecast to be the key driving force in British Columbia's population growth over the next decade. Net-migration is expected to account for 71 percent of the population growth in the province reflecting approximately 501,000 people. Immigrants from other countries will continue to add significantly to the ethnic diversity of British Columbia's population over the forecast period.

- The annual number of births in British Columbia is forecast to increase from 43,000 to 46,000 over the forecast period. Significant shifts and swings in birth rates are also anticipated across regions.

- Aging of the population will lead to increased mortality in British Columbia. The number of deaths will likely increase from 22,000 in 1989 to 27,000 in 1995 and 30,000 in 2000.

- The "median age" of British Columbians is expected to increase from about 34.2 years in 1989 to 37.6 years by 2000 indicating a structural shift in the population towards higher age groups.

Regional Outlook:

- The Lower Fraser Valley is expected to emerge as the fastest growing region in the Province. The population in the Lower Fraser Valley is projected to increase by 51 percent between 1989 and 2000 compared to a 23 percent overall population growth in the province. This means an increase of 223,000 persons in the Lower Fraser Valley by 2000. Approximately half of this increase is likely to occur in Surrey.

- Other regions of the province that are expected to experience significant growth in the future include Vancouver, Coquitlam, Richmond and Central Okanagan. Over the next ten years, the projected population increases in these areas are as follows: Vancouver 17 percent, Coquitlam 35 percent, Richmond 22 percent and Central Okanagan 29 percent. Kimberley and Trail are forecast to lose population to other regions over the next decade.

- Vancouver, Greater Victoria and the Lower Fraser Valley are forecast to receive approximately one-half of the total migrants to British Columbia over the next decade.

- Over the 1989-1995 period, the increase in the annual number of births in Vancouver, Surrey, Burnaby and Coquitlam is forecast to range between 8 percent and 14 percent. During the following five years to 2000, Burnaby and Coquitlam are expected to experience declines in births. Prince George is likely to experience a modest change in births to 1995, but an increase of 38 percent between 1995 and 2000 due to an increase in the number of childbearing women.

- Aging of the population will have a profound impact on mortality especially in the Lower Fraser Valley, Coquitlam and Central Okanagan. The number of deaths in these three areas will likely increase by 68 percent, 55 percent and 50 percent respectively over the next decade. In Greater Victoria, the number of deaths is projected to increase by 22 percent over the same period. In Vancouver, however, the increase is expected to be modest.

Structural Changes:

- The age profile of British Columbians is forecast to change significantly during the next decade. The proportion of seniors in British Columbia is expected to expand considerably while the infant (under 1 year) and 1-4 year old child populations are forecast to display only marginal growth.

- The future growth rate in the infant population is likely to vary significantly across regions. By 2000, Vancouver, Langley, Surrey and Prince George are expected to experience an increase of 24 percent, 32 percent, 15 percent and 43 percent respectively in the number of infants. Greater Victoria, Alberni and Chilliwack are likely to be among the most critically affected areas in terms of declines in infant population.

- The pre-school child (1 to 4 years old) population in Vancouver, Surrey, Burnaby and Coquitlam is projected to increase by 39 percent, 18 percent, 28 percent and 23 percent respectively by 2000. Trail is expected to have a net loss of 29 percent and Peace River South of 18 percent.

- In the Lower Fraser Valley and Vancouver the child (under 15) population is forecast to increase dramatically over the next decade. The number of children in the Lower Fraser Valley will probably increase by 36 percent and in Vancouver by 26 percent. Trail and Alberni are expected to experience a drop of 26 percent and 17 percent respectively.

- The childbearing female population (15 to 49 age group) in the Lower Fraser Valley, Vancouver and Coquitlam is projected to increase by 44 percent, 17 percent and 24 percent respectively over the next decade. Over the same period, a 13 percent decrease in the "15 - 49" women in Alberni is forecast.

- The number of seniors in British Columbia will increase by 38 percent in the next decade. Currently, seniors account for 13 percent of British Columbia's population. By 2000, this share is forecast to expand to 14.5 percent.

- The majority (29 percent) of seniors' growth is expected to be concentrated in the Lower Fraser Valley. Vancouver is likely to experience a 6 percent drop and Greater Victoria a modest increase in seniors population.

- The number of young seniors aged 65 to 79 in British Columbia will increase by 29 percent over the next ten years. The largest increase is forecast to occur in Surrey.

- The elderly seniors' population (80+ age group) is projected to experience the highest growth (approximately 73 percent) of all the age groups over the next decade. Surrey and Central Okanagan are likely to be among the fastest growing areas in terms of this population. In Surrey the number of elderly seniors is forecast to increase by 120 percent and in Central Okanagan by 111 percent over the next ten years.

Demographic Outlook

1.0 INTRODUCTION

The demographic structure and size of the population are among the most critical factors influencing the delivery and management of health care resources. Ongoing structural changes and regional shifts in the population constantly present challenges to the health care planners and managers to maintain an efficient and effective health care system both at provincial and regional levels and to contain program costs within reasonable bounds. Changes in size, structure and distribution of population have significant policy implications for health care planning and resource allocation.

This paper focuses on demographic shifts and structural changes (i.e., changes in age/sex composition) in British Columbia's population over the next five to ten years and identifies areas of the province that are expected to experience significant fluctuations in size and age/sex composition of the population. In many instances, the impacts of these demographic fluctuations on various Ministry's programs are quantified.

While the dicussion revolves around those areas of the province that are expected to experience significant population changes, the detailed tables and maps in this document provide a comprehensive and broader perspective.

The discussion is based on the Ministry of Finance and Corporate Relations' forecast "P.E.O.P.L.E. 16" of August, 1990[1] and provides a short term (1989 - 1995) and a medium term (1989 - 2000) demographic outlook for British Columbia by Local Health Area (LHA). The "P.E.O.P.L.E. 16" forecast uses 1989 as the base year for projections; consequently, in the following discussion, projected demographic changes are compared with the 1989 actual data. The discussion, however, proceeds with an overview of the historical changes in British Columbia's population.

2.0 HISTORICAL OVERVIEW

Since 1981, the population of British Columbia has increased at an average rate of 1.2 percent per year from 2,744,500 in 1981 to 3,053,300 in 1989. By 1989, this trend added approximately 309,000 (or 11.0 percent) more persons in British Columbia compared to the 1981 level. Approximately 48.0 percent of this increase was due to the net impact of natural causes such as births and deaths; and the rest, 52.0 percent, represents the net in-migration to British Columbia. In aggregate, over the eight year period (1981 - 1989), the international migration accounted for approximately 66.0 percent of the total inflow of migrants to the province.

---

1 "P.E.O.P.L.E. 16" refers to Series 16th of Population Extrapolation for Organizational Planning with Less Error.

The increase in the provincial population was accompanied by a significant structural shift and redistribution of population across the various regions of the province.

Shifts in the age and sex composition are reflections of the declining birth rate and increase in the life-expectancy of the population. The redistribution of the population, on the other hand, is generally linked to economic factors. To a certain extent, the level of international migration (immigration) to British Columbia under the "family" category also effects the regional balance of the population[2]. This happens because most of the immigrants that enter British Columbia tend to move into those areas where their immediate families reside. They stay there, at least, for an initial period of social/cultural adjustment irrespective of the economic opportunities elsewhere in the province.

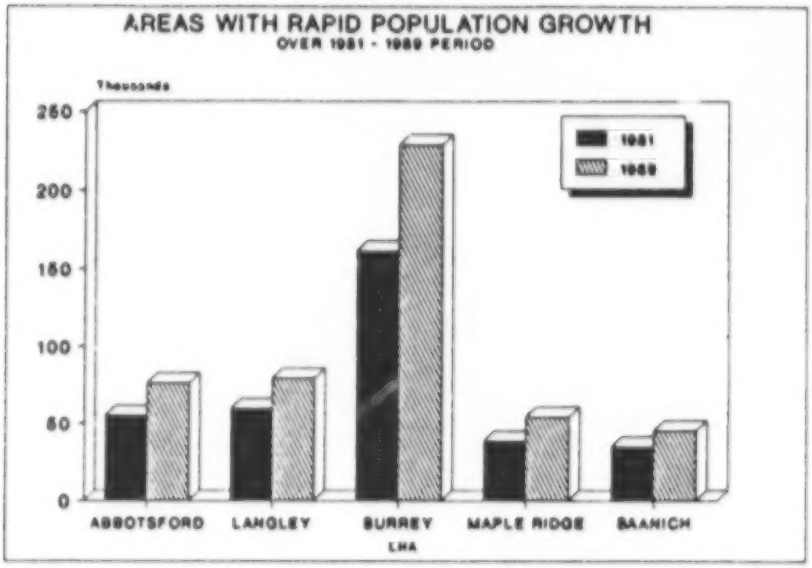
As a result of the structural shift, the senior (65 + age group) population in British Columbia has increased by 32.0 percent over the 1981 - 1989 period, compared to the 11.0 percent growth in overall provincial population. In 1981, there were 298,200 seniors in the province. By 1989, the number was 394,800 reflecting a cumulative increase of about 95,800 seniors over the 8-year period. In contrast, the number of children under the age of 15 increased only by about 5.0 percent from 588,300 in 1981 to 619,600 in 1989. The dependency ratio, which is a ratio of the dependent population (i.e. under 15 and 65+ age groups) to the 15 to 64 age group, increased from 47.7 percent in 1981 to 49.7 percent in 1989.

Changes in the regional distribution of population pose a different challenge to the health care system and may precipitate a requirement for reallocation of resources. Over the past 8 years, some regions of the province experienced significant increases in population compared to the provincial trend. In Surrey, Abbotsford, Langley, Maple Ridge and Saanich these increases were in excess of 30 percent, and in some cases as much as 40 percent. In absolute terms, increases in these five areas were: 67,662, 21,365, 19,704, 15,341 and 10,604 respectively (Figure 1). Other areas, such as Kimberley, Trail and Peace River North, recorded close to 15.0 percent net declines in population.

---

[2]"Family" category is defined to include spouse, finance(e), parents and never married children, adopted children (under 13), or orphaned brothers, sisters, nephews, nieces and grandchildren.

FIGURE 1



3.0 FUTURE PROSPECTS

Compared to the past increase of 1.2 percent per year, the population of British Columbia is forecast to increase much more rapidly - at an average rate of 2.0 percent per year over the 1989 - 1995 period. Following that, the rate of growth is projected to moderate to 1.7 percent per year over the 1995 to 2000 period. Over the entire 11-year period, 1989 to 2000, the rate of growth is forecast to average around 1.9 percent per year. This rapid rate of growth will add significantly to the British Columbia's population. It is expected that in 1995, there will be 399,000 more persons in the province compared to 1989. By 2000, there will be 702,000 more British Columbians. In other words, by 2000, the population of British Columbia will have increased by as much as the existing population base of Vancouver (LHA 39), Maple Ridge (LHA 42) and Greater Victoria (LHA 61) combined.

Over the short term, the increases are expected to average around 66,500 per year or more than the size of Nanaimo's current population. In the following period, 1995 to 2000, the growth is likely to be around 60,500 per year. As detailed below, this rapid growth, will be accompanied by significant distributional and structural changes and will have profound health policy implications in terms of resource management and planning. For example, the changes in 65+ age cohort will impact institutional, continuing care and pharmacare programs. Similarly, the fluctuations in the number of births will affect the delivery of peri-natal care and public health services.

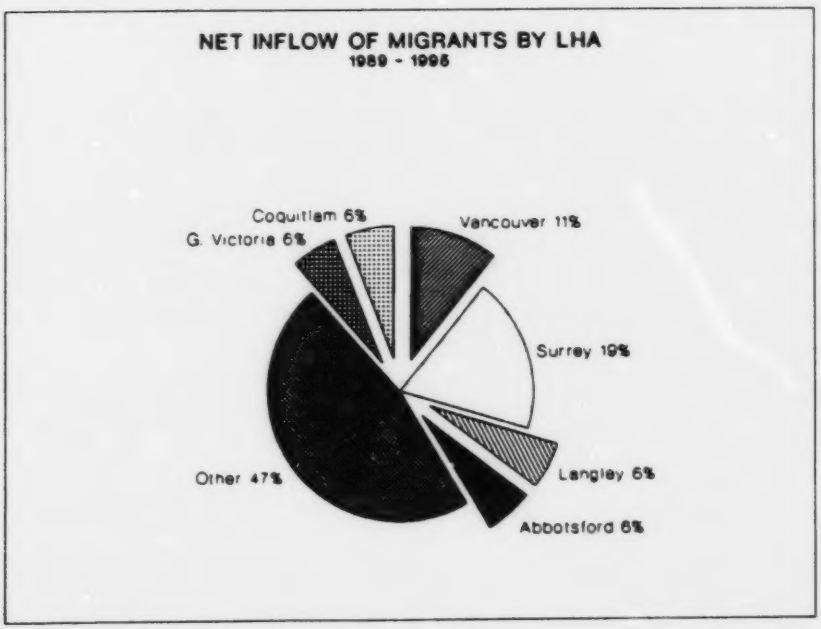
3.1 SOURCES OF PROJECTED POPULATION INCREASE

i) Migration:

Net-migration, which is defined as a sum of net interprovincial and net international migration, is expected to be the driving force in British Columbia's population growth over the next five to ten years. During the first half of the forecast period to 1995, over 70.0 percent of the population increase is expected to be due to the net inflow of migrants. During the second half, 1995 - 2000, net-migration is projected to account for approximately 72.0 percent of the population growth. A little more than half of the total net-migration will be made up of migrants from other provinces.

As shown in Figure 2, Surrey, Vancouver, Coquitlam, Abbotsford, Langley and Greater Victoria are expected to experience significant population gains through migration. Together these six LHAs will account for over 50.0 percent of the net inflow of migrants.

FIGURE 2



As shown in Table 1, Surrey will lead the trend accounting for approximately 52,000 migrants over 1989 - 1995 period and about 86,000 migrants over 1989 - 2000 on a 1989 population base of 228,700. Vancouver is expected to account for 31,000 migrants over the short term and will gain 19,000 more migrants over the subsequent five year period. In 1989, Vancouver had a population of 456,100.

Abbotsford and Langley will together gain about 34,000 migrants over the short term and 37,000 over the following five years, 1995 to 2000.

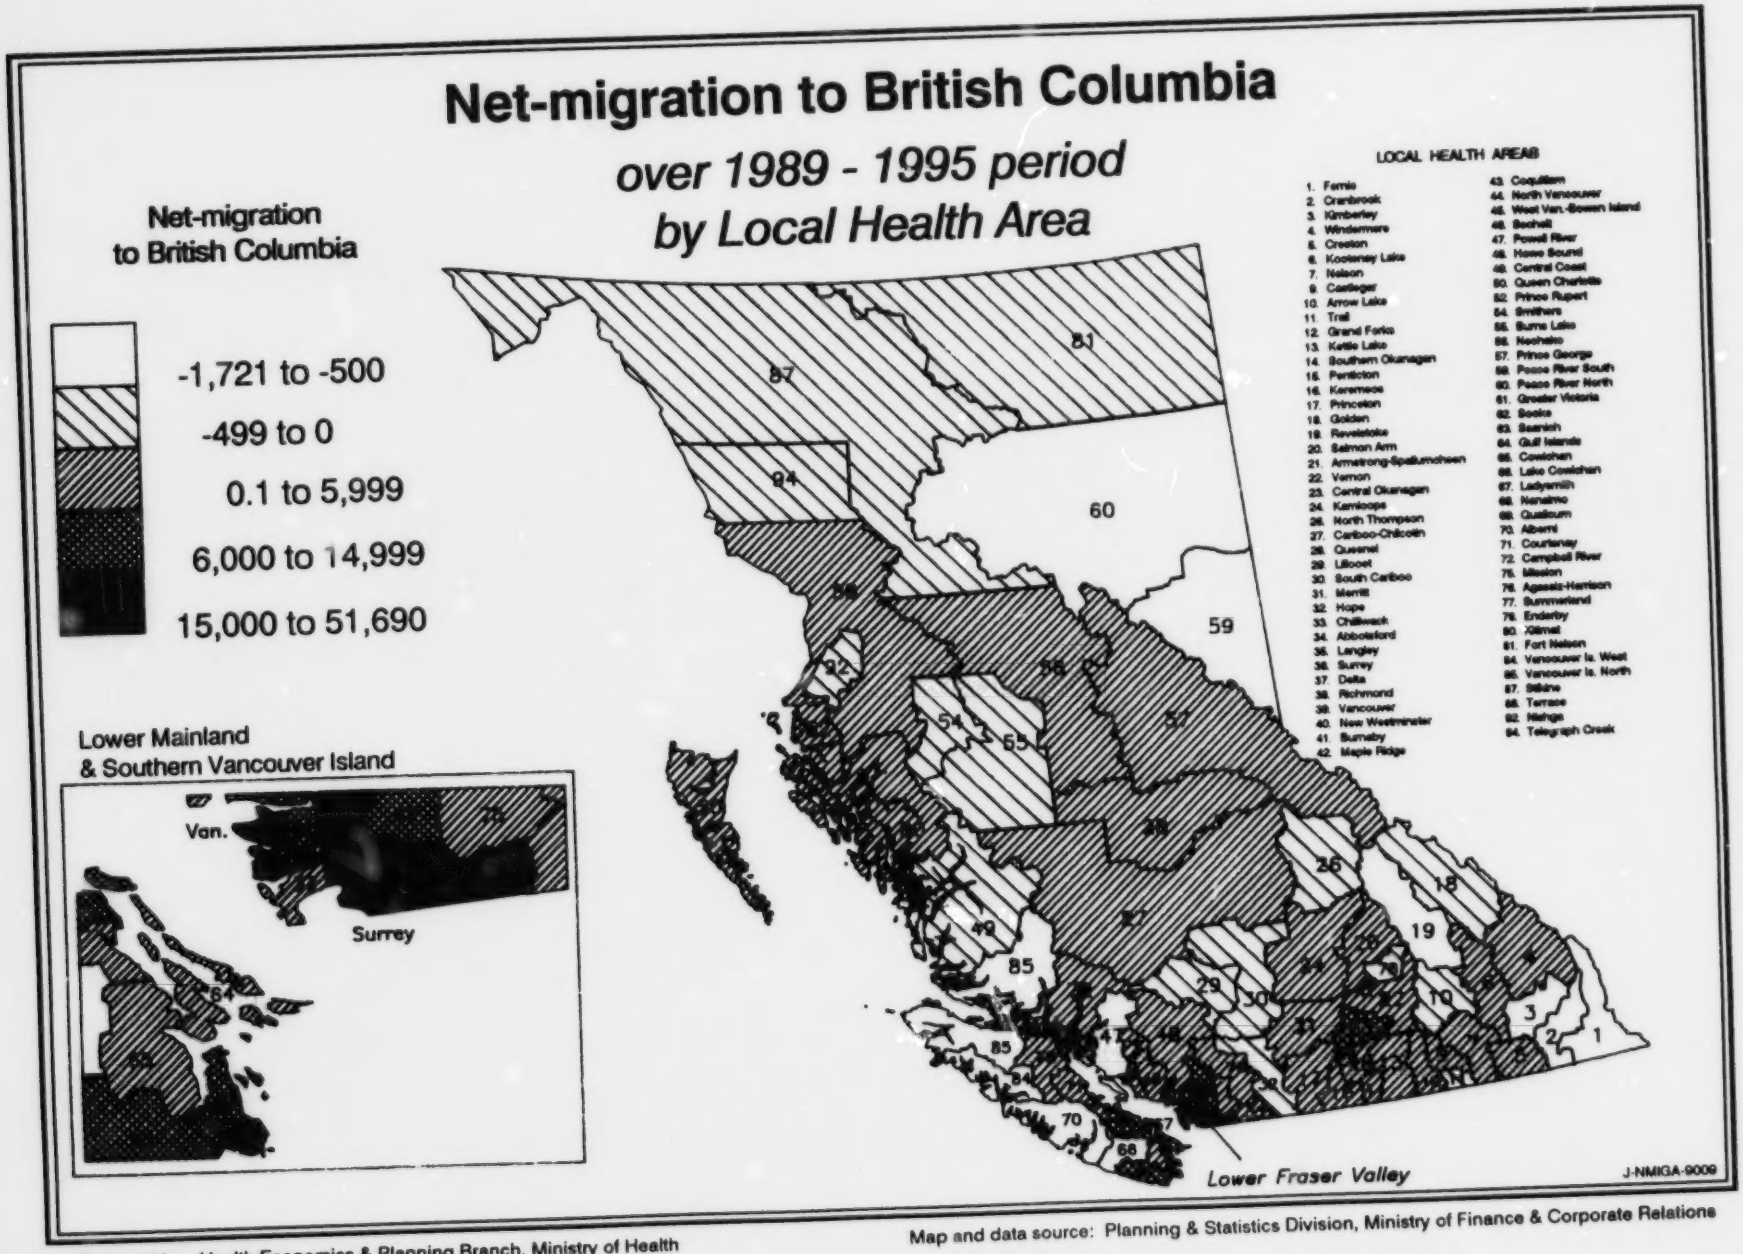
Coquitlam and Victoria will respectively attract 18,000 and 15,000 migrants over 1989 - 1995. During the subsequent five years, 1995 - 2000, the influx will slow down to a total of 11,000 and 10,000 respectively.

Table 1
NET INFLOW OF MIGRANTS

LHA	MIGRANTS		
	1989–1995	1995–2000	TOTAL
ABBOTSFORD	18,380	18,480	36,820
LANGLEY	16,040	18,960	35,000
SURREY	51,690	33,850	85,540
VANCOUVER	30,590	18,840	49,430
COQUITLAM	17,870	11,260	29,130
Gr. VICTORIA	15,140	10,430	25,570
OTHER	133,140	106,110	239,250
B.C.	282,830	217,910	500,740

The future estimates of immigration are based on existing Federal Government policies that favour increased immigration to forestall a decline in the Canadian population as a result of low fertility rates. Current projections are based on the assumption that the number of immigrants to Canada will increase from 191,000 in 1989 to 200,000 by 1996. Beyond 1996, levels are forecast to remain constant at 200,000 per year. The immigration flows to Canada (and therefore to British Columbia), however, are very sensitive to political and economic events around the world. Major political calamities or economic disruptions as well as major improvements in any part of the world could alter the underlying assumptions and distort the current projection.

FIGURE 3



Prepared by: Health Economics & Planning Branch, Ministry of Health

Map and data source: Planning & Statistics Division, Ministry of Finance & Corporate Relations

The Government of British Columbia is currently negotiating with the Federal Government in order to secure a Canada/British Columbia Immigration Agreement. Such an agreement, if approved, would provide this province with greater responsibility over the selection of would-be immigrants. While the policy will seek to maximize the social, cultural and economic development of the province, it is anticipated that economic interest will take precedence. A new Immigration Agreement holds promise of increased investment, improved professional and entrepreneurial expertise and reduction of critical labour market shortages. The Ministry of International Business and Immigration is coordinating the development and negotiations for this proposed agreement.

ii) **Births:**

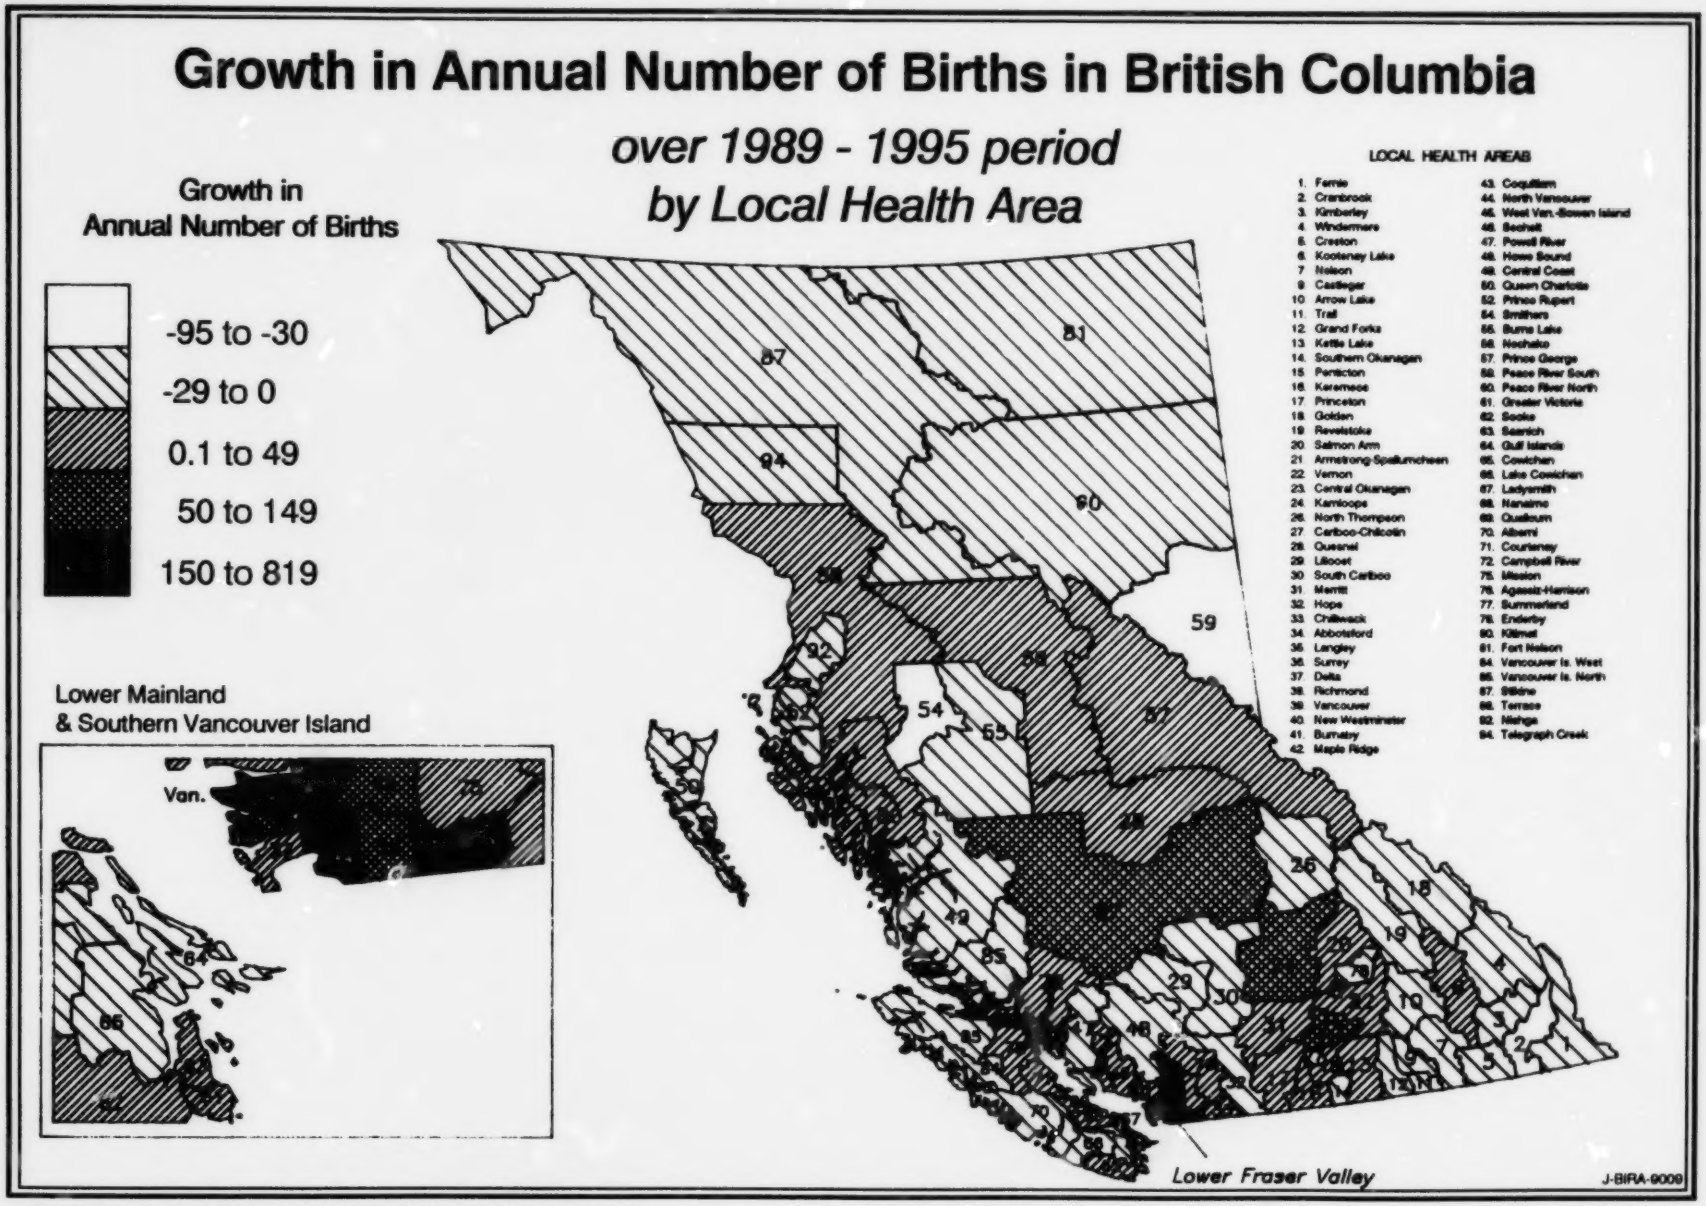
The female population in the child bearing age group (15 to 49 years) is expected to increase by 11.5 percent by 1995. Over the longer term (1989 - 2000), however, this increase will be around 17.0 percent. In spite of these increases, the annual number of births in British Columbia is expected to increase only by about 6.0 percent from 43,100 in 1989 to 45,700 by 2000. This is a reflection of the declining age specific fertility rate for 15-19 and 20-24 age groups. For other age groups, a slight increase in fertility rate caused by deferring births at younger ages is assumed.

The increased inflow of migrant women might affect the future fertility patterns in British Columbia. However, because the number of migrant women coming into British Columbia will be relatively small compared to the base "15-49" female population, any changes that might result in birth rates because of the inflow of migrant women are not expected to have any substantive impact on the overall fertility rate in the province.

Because of the relatively low growth in the number of births, no significant impact on the delivery of pre-natal, birth and post-natal care and public health services is expected at the provincial level. At the regional level, however, the health care system will need to have the flexibility to respond to regional shifts and swings in birth rates. For example, by 1995, Vancouver, Coquitlam and Burnaby may experience an increase of approximately 800, 200 and 160 cases, respectively, of peri-natal care compared to the number of cases in 1989. On the other hand, the number of births in Prince George is projected to remain around 1,450 per year over the short term.

Over the 1995 - 2000 period, however, a reversal of the trend is anticipated. By 2000, Burnaby and Coquitlam are likely to experience a decline in the number of births relative to the 1995 experience (Table 2). In Vancouver, no significant change is expected over this period. Prince George which is expected to experience virtually no change in the number of births to 1995, is forecast to record a significant increase by 2000.

FIGURE 4



Prepared by: Health Economics & Planning Branch, Ministry of Health

Map and data source: Planning & Statistics Division, Ministry of Finance & Corporate Relations

In the Lower Fraser Valley (i.e., Surrey, Abbotsford, Langley and Maple Ridge areas), the annual number of births will probably increase from 7,100 in 1989 to 8,000 in 1995. Over 1995 - 2000, the number is expected to increase further by approximately 440. In Surrey, the projected number of births will change from 3,760 in 1989 to 4,200 in 1995 and 4,380 in 2000.

Table 2
ANNUAL NUMBER OF BIRTHS

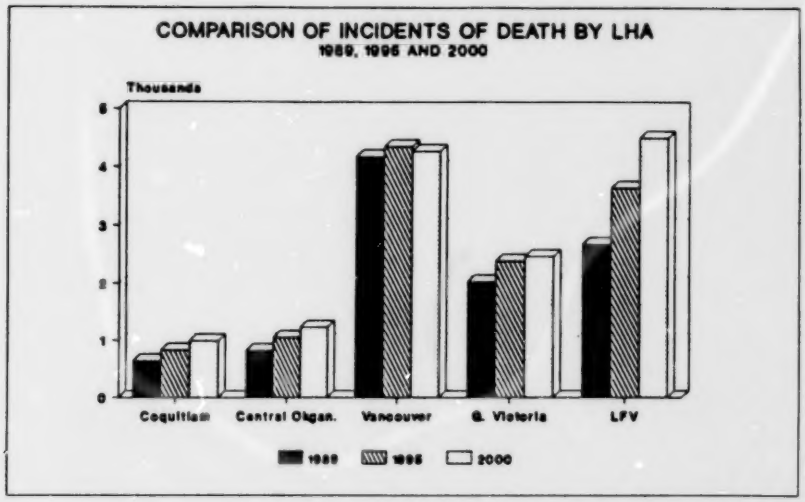
LHA				CHANGE	
	1989	1995	2000	1989 TO 1995	1995 TO 2000
VANCOUVER	6,070	6,890	6,900	820	10
BURNABY	2,070	2,230	2,020	160	(210)
COQUITLAM	2,180	2,380	2,280	200	(100)
PRINCE GEORGE	1,460	1,480	1,870	10	410
LOWER FRASER VALLEY	7,100	8,000	8,440	900	440

iii) **Deaths:**

Since the early 1940's, there has been a general decline in death rates (i.e., the number of deaths per 1000 population) in British Columbia due largely to the relatively younger age structure of the population over that period. Since 1984, the death rate has increased, and will continue to increase, as a result of the aging of the population into higher mortality age groups. As a result of the "aging" process, the annual mortality in British Columbia is projected to increase from about 22,200 in 1989 to 26,800 in 1995 and by another 2,900 to 29,700 in 2000.

Historically, the majority of deaths in British Columbia occur in Central Okanagan, Surrey, Vancouver, Burnaby and Victoria as these have been the preferred retirement locations. In 1989, for example, over 43.0 percent (9,660) of all deaths in the province occurred in these five areas combined. In the future, the majority of deaths in the province will again be concentrated in these five areas. However, as a large proportion of population moves into higher age groups, all areas of the province will notice significant increases in the incidence of death.

FIGURE 5



Since an incidence of death is generally accompanied by prolonged intensive care and nursing, the system will need to be prepared to respond to these demands at regional levels. Various studies have shown that a disproportionally higher amount of health care resources are consumed during the last year of life of the decedents[3]. Consequently, additional resources will be required in many regions of the province to respond to the health care needs of this population. As illustrated in Figure 5, the number of deaths per year in Coquitlam will likely increase by 29.0 percent from 640 in 1989 to 830 in 1995 and to 990 in 2000; in Central Okanagan, the number of dealths is forecast to increase by 30.0 percent from 820 in 1989 to 1,060 in 1995 and to 1,230 in 2000.

On the other hand, the number of deaths per year in Vancouver is expected to fluctuate from 4,180 in 1989 to 4,350 in 1995 and to 4,270 in 2000. In Greater Victoria, however, an increase from 2,030 in 1989 to 2,400 in 1995 and 2,500 in 2000 is forecast.

In the Lower Fraser Valley, the number of deaths is projected to increase by 36.0 percent from 2,680 in 1989 to 3,640 in 1995. In the subsequent five year period, 1995 - 2000, this number is expected to increase further by 24.0 percent to 4,500. Within the Lower Fraser Valley, the number of deaths in Surrey is forecast to increase by 37.0 percent from 1,390 in 1989 to 1,910 in 1995 and a further 21.0 percent from 1,910 in 1995 to 2,310 in 2000.

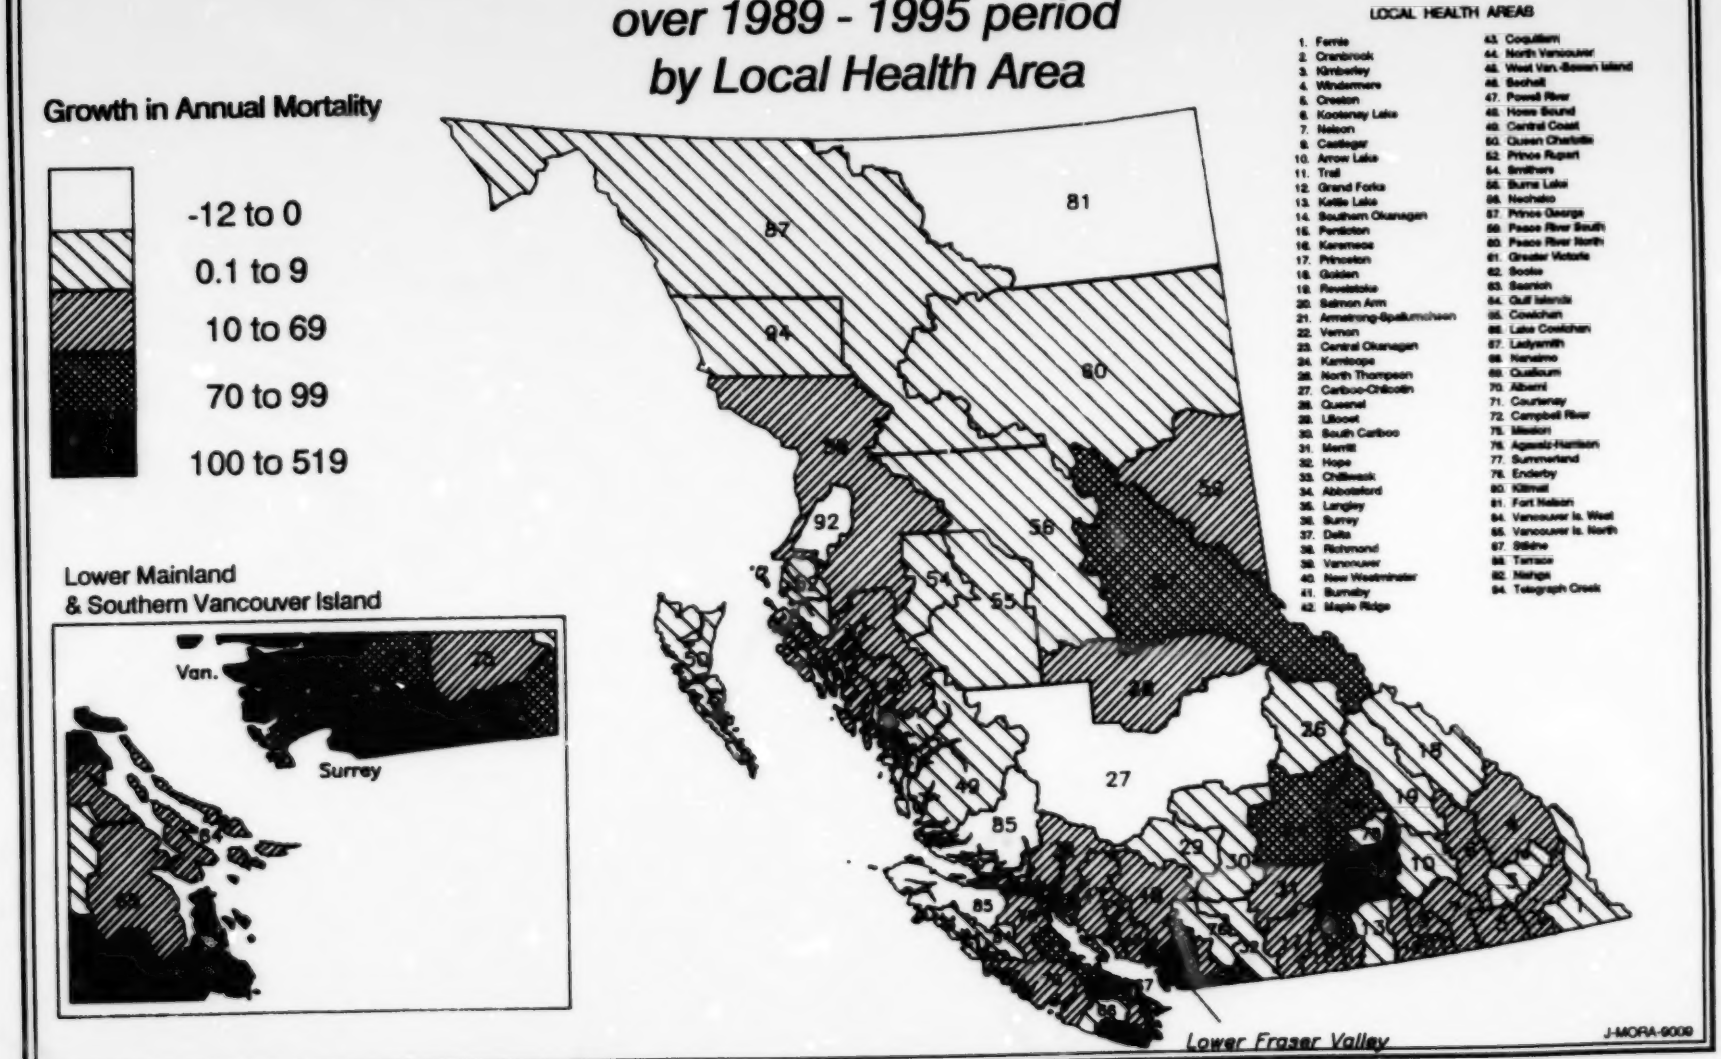
Growth in Annual Mortality in British Columbia

over 1989 - 1995 period by Local Health Area



Prepared by: Health Economics & Planning Branch, Ministry of Health

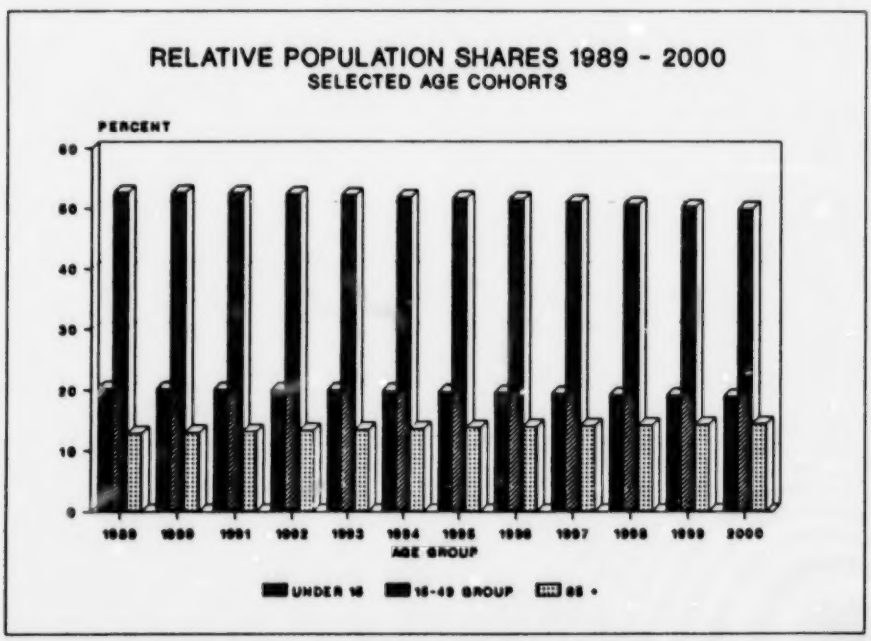
Map and data source: Planning & Statistics Division, Ministry of Finance & Corporate Relations

3.2 STRUCTURAL AND DISTRIBUTIONAL SHIFTS IN POPULATION

i) Structural Shifts:

Over the forecast period, significant shifts in the age structure of the population are expected. In 1989, for example, seniors (65+ age group) accounted for 12.9 percent of British Columbia's population; children (under 15) and 15-49 age groups represented 20.2 percent and 52.7 percent of the population share respectively. By 1995, both children and 15-49 age groups are forecast to experience decline in their relative population shares to 19.5 percent and to 51.5 percent respectively. The seniors, however, are expected to account for 14.0 percent of the 1995 population up from 12.9 percent in 1989. By 2000, a further increase to 14.5 percent in senior's share is forecast. Children and 15-49 age cohorts are projected to continue to experience declines in their relative population shares (Figure 7). Over the short term, the number of seniors in British Columbia is forecast to increase by 84,500 (21.5 percent) from 394,000 in 1989 to 478,500 in 1995; the number of children will likely increase by 10.0 percent from 619,600 in 1989 to 681,500 in 1995; and 15-49 age group is expected to expand by 11.0 percent from 1,608,100 in 1989 to 1,785,000 in 1995.

FIGURE 7



Over 1995-2000 period, the number of seniors will further increase by about 13.5 percent (65,500) to 544,000 in 2000; the number of children will increase by 4.5 percent to 711,500 and 15-49 age group population will increase by 5.0 percent to 1,874,000.

On the other hand, infants (under 1 age group) and pre-school children (1-4 age group) that also consume a relatively higher proportion of health care resources are expected to place considerably less stress on the system. These two age groups are expected to grow at a relatively slower pace. The number of infants will increase from 42,900 in 1989 to 45,500 in 1995 and to 46,000 in 2000. The pre-school children will reach 184,700 in 1995 from 169,300 in 1989; in 2000 there will be approximately 187,000 pre-school children in the province.

No significant changes in the sex composition of the population are anticipated. The female population in the childbearing age group 15-49 is forecast to increase at an average rate of 1.8 percent per year from 802,300 in 1989 to 894,000 in 1995. Following that, the rate of growth is expected to moderate to 1.0 percent per year to 2000. In 2000, there will be approximately 940,000 women in the childbearing age group in British Columbia.

Because of the wide diversity in utilization patterns and health care needs across population age groups, structural shifts in the population will require that the system be prepared to re-allocate its resources to ensure that a balanced mix of services are available to serve the future population. The per capita use of medical care services and hospital resources in the adult population tends to increase with age from about the age of 15-24 and is highest among seniors. Consequently, the increase in 65+ population will place greater demand for seniors' health care services. The regional demand for health care resources will, however, mirror regional shifts in the population.

ii) **Distributional Changes**

Compared to the provincial trend, the population in certain regions of the province is expected to grow rapidly, while in others it will fall.

These distributional changes will affect the regional balance of health care delivery in the province. Age specific distributional adjustments in British Columbia's population are projected to be as follows:

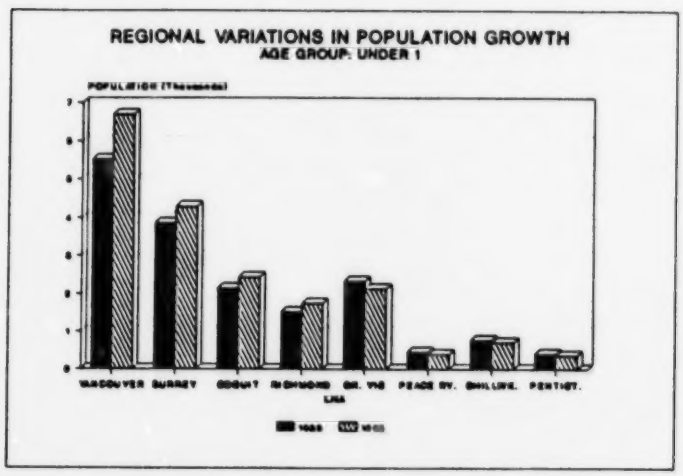
a) **"Under 1" Age Group**

Over the 1989 - 1995 period, most of the local health areas in the province are expected to experience declines in their "under 1" population. With these imminent declines some of the current resources, especially those relating to peri-natal care and public health, might not be fully utilized in some regions of the province.

Based on current projections, Vancouver, Surrey, Coquitlam and Richmond are expected to record significant growth in infant population over the 1989 -1995 period. The number of infants in Vancouver is projected to increase by 24.0 percent from 5,420 in 1989 to 6,700 in 1995. For Surrey and Coquitlam the forecast increases are: 11.0 percent (from 3,860 in 1989 to 4,290 in 1995) and 13.0 percent (from 2,150 in 1989 to 2,430 in 1995), respectively. In Richmond the number is expected to increase by 15.0 percent from 1,520 in 1989 to 1,750 in 1995 (Figure 8).

The following five regions will be among the most critically affected areas in terms of declines in infant population: Greater Victoria, Peace River South, Chilliwack, Penticton and Alberni. The infant population in Greater Victoria is expected to drop from 2,340 in 1989 to 2,140 in 1995. The declines in the other four areas are projected to be between 8.0 percent and 14.0 percent.

FIGURE 8



b) "1 to 4" Age Group

Over the 1989 - 1995 period, a majority of health areas will experience a drop in their respective "1 to 4" age group population. In Qualicum, the number of children aged 1 to 4 is forecast to decrease by 30.0 percent (from 1,190 in 1989 to 840 in 1995). Over the same period, Cranbrook is expected to experience a drop of 275 (22.0 percent) and Penticton 260 (16.0 percent). At the same time, Vancouver, Surrey, Burnaby, Coquitlam, Richmond and North Vancouver will register significant growth in this age cohort by 1995 (Table 3).

Over the subsequent five year period, 1995 - 2000, significant regional shifts in 1 to 4 year old population are projected to occur. Certain areas of the province such as Surrey, Richmond and North Vancouver that are forecast to record net gains during 1989 - 1995 are expected to experience declines in the 1995 - 2000 period. Prince George and Vancouver are, however, likely to experience significant growth over the 1995 - 2000 period.

By 2000, the "1 to 4" child population in Vancouver, Burnaby, Coquitlam and the Lower Fraser Valley is expected to increase by 7,260 (39.0 percent), 1,850 (28.0 percent), 1,870 (23.0 percent), and 6,190 (21.0 percent) respectively. Trail, Alberni and Peace River South are, however, projected to have a net loss of 330 (29.0 percent), 250 (14.0 percent) and 330 (18.0 percent) respectively by 2000.

Table 3
REGIONAL CHANGES IN "1-4" POPULATION

LHA				CHANGE	
	1989	1995	2000	1989 TO 1995	1995 TO 2000
VANCOUVER	18,580	24,480	25,820	5,900	1,360
SURREY	15,474	17,910	18,250	2,436	340
BURNABY	6,578	8,670	8,450	2,092	(220)
COQUITLAM	8,182	10,000	10,030	1,838	30
RICHMOND	6,048	7,340	6,900	1,292	(440)
N. VANCOUVER	5,583	6,910	6,100	1,347	(810)
TRAIL	1,117	880	790	(257)	(70)
LFV	29,635	34,540	35,820	4,905	1,280

c) <u>"Under 15" Age Group</u>

During the 1989 - 1995 period, approximately half of the LHAs will experience a decline in "child" population and this trend is expected to continue to the year 2000. Consequently, these changes will affect the delivery of paediatric and family care at the regional level.

As shown in Table 4, this declining trend will be relatively more pronounced in Alberni and Trail.

Table 4
REGIONAL CHANGES IN NUMBER OF CHILDREN (UNDER 15)

LHA				CHANGE	
	1989	1995	2000	1989 TO 1995	1995 TO 2000
ALBERNI	6,940	6,450	5,770	(490)	(680)
TRAIL	4,280	3,850	3,170	(430)	(680)
N. VANCOUVER	19,200	23,450	24,420	4,250	970
COQUITLAM	27,470	34,710	38,040	7,240	3,330
LFV	102,793	127,880	140,120	25,087	12,240
VANCOUVER	66,040	74,190	83,480	8,150	9,290

Many areas including Vancouver, Coquitlam and the Lower Fraser Valley will record significant growth in this population group. "Under 15" population in the Lower Fraser Valley is likely to increase by 24.0 percent from 102,800 in 1989, to 127,900 in 1995. Over the subsequent five years (1995 to 2000), a further 10.0 percent increase from 127,900 in 1995 to 140,100 in 2000 is forecast. In Vancouver and Coquitlam the "Under 15" population is projected to increase by 26.0 percent (from 66,040 in 1989 to 83,500 in 2000) and 38.5 percent (from 27,470 in 1989 to 38,050 in 2000) respectively. Within the Lower Fraser Valley area, the number of children in Surrey will increase by 12,880 (24.5 percent) from 52,360 in 1989 to 65,250 in 1995; by 2000, this cohort is expected to increase to 70,400.

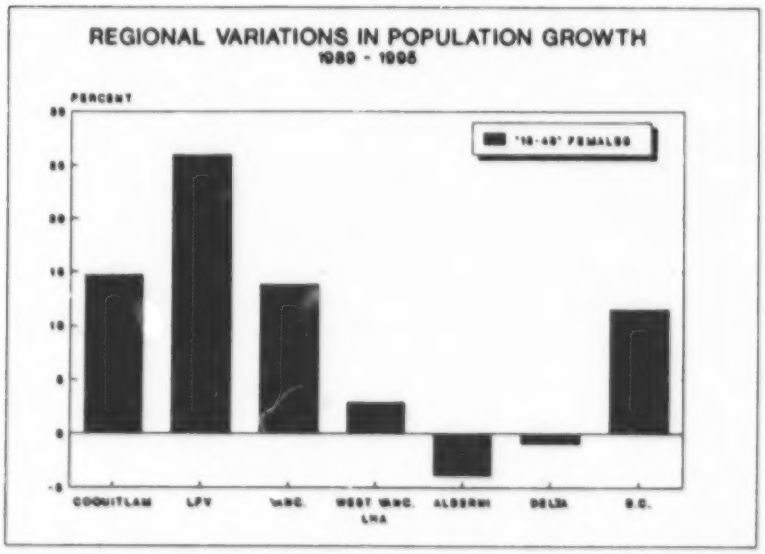
d) <u>"15-49" Females</u>

Over the short term the number of women in the child bearing age group will increase significantly in the Lower Fraser Valley, Coquitlam, and Vancouver areas. In the Lower Fraser Valley, the increase is projected to be around 26.0 percent from 116,640 in 1989 to 146,650 in 1995. In Coquitlam, the number of women in this cohort will increase by 15.0 percent and in Vancouver by 13.0 percent (Figure 9). Within the Lower Fraser Valley, Surrey is likely to experience an increase of approximately 27.0 percent in the "15-49" female population by 1995.

Over the subsequent five year period, 1995 - 2000, these three areas are forecast to experience a further increase in the "15-49" female population; in Vancouver, however, the increase is expected to be modest. In Prince George, as well, the number of "15 - 49" women is forecast to increase by about 17 percent over this period.

West Vancouver, Alberni and Delta, on the other hand, will be among those experiencing declines in the "15-49" female population over the 1995 - 2000 period. In Alberni, the number is expected to decline by 4.0 percent from 7,450 in 1989 to 7,160 in 1995 and by another 9.0 percent to 6,490 in 2000. In Delta and West Vancouver, the numbers are likely to decline by 6.0 percent and 2.0 percent respectively by 2000.

FIGURE 9



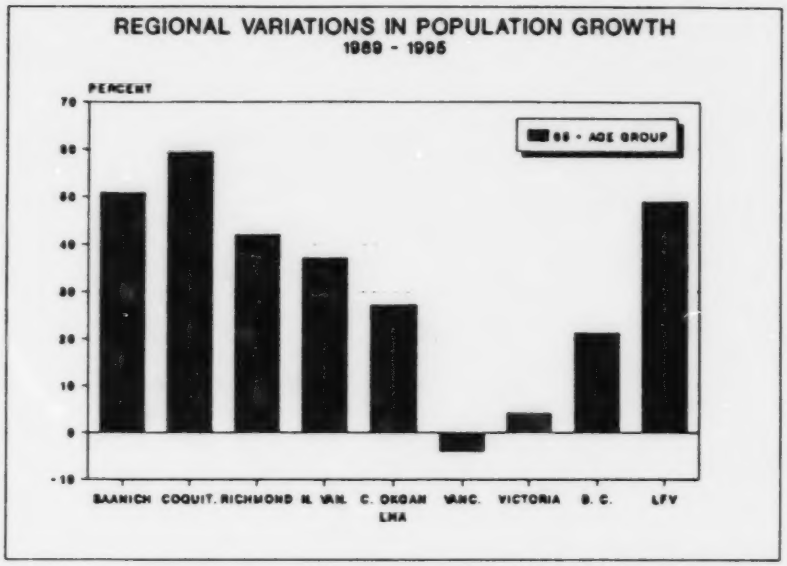
e) "65+" Age Group

Over the short term, aside from the Lower Fraser Valley, other areas will experience significant increases in their seniors population. These increases are projected as follows: Coquitlam (+59.0 percent; from 8,270 in 1989 to 13,190 in 1995), Saanich (+51.0 percent; from 7,390 in 1989 to 11,150 in 1995), Richmond (+42.0 percent; from 10,470 in 1989 to 14,860 in 1995), North Vancouver (+37.0 percent; from 11,150 in 1989 to 15,260 in 1995) and Central Okanagan (+27.0 percent; from 17,580 in 1989 to 22,350 in 1995).

For the Lower Fraser Valley, a 49.0 percent increase from 45,570 in 1989 to 68,110 in 1995 is forecast.

Vancouver is expected to experience a 4.0 percent drop in its seniors population and Greater Victoria is forecast to record a relatively modest growth (4.0 percent) from 43,450 in 1989 to 45,100 in 1995 (Figure 10).

FIGURE 10



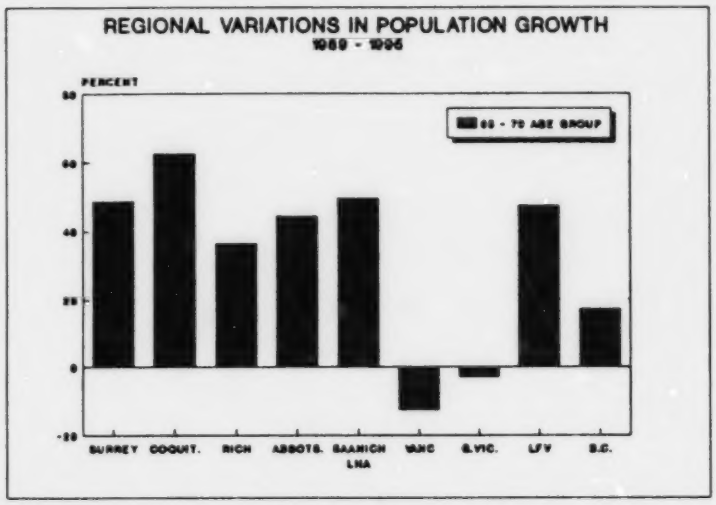
f) "65 - 79" Age Group - "Young Seniors"

Over the short term, almost all areas of the province are expected to experience increases in their "young seniors" population. Surrey, however, is expected to lead the trend followed by Coquitlam, Abbotsford, Richmond, and Saanich. Increases in these areas are projected as follows: Surrey 9,590 (49.0 percent), Coquitlam 4,280 (63.0 percent), Abbotsford 3,480 (44.0 percent), Richmond 3,150 (36.0 percent), and Saanich 3,110 (55.0 percent). In Vancouver the "young senior" population is forecast to drop by 6,770 (12.0 percent) by 1995 (Figure 11).

By 2000, the Lower Fraser Valley will likely have 32,110 (87.0 percent), more "young seniors" compared to the 1989 counts. Increases in other areas are forecast as: Coquitlam 7,280 (107.0 percent), Richmond 5,810 (67.0 percent), North Vancouver 5,830 (64.0 percent) and Saanich 4,900 (78.0 percent). Within the Lower Fraser Valley, Surrey is likely to have 16,100 or 82.0 percent more "young seniors" in 2000 compared to the 1989 estimates.

On the other hand, the number of "young seniors" in Vancouver and Greater Victoria is expected to decline by 15.0 percent and 9.0 percent respectively over the next decade.

FIGURE 11



g) "80 + " Age Group - "Elderly Seniors"

Over the next decade, almost all areas of the province will experience an increase in the "80 +" population. By far the largest increase is expected in Surrey followed by Greater Victoria. The number of "elderly seniors" in Surrey will increase from 4,350 in 1989 to 6,820 in 1995 and 9,590 in 2000; in Greater Victoria the numbers will increase from 10,850 in 1989 to 13,210 in 1995 and 15,290 in 2000 (Table 5).

Increases in Vancouver, Central Okanagan, Abbotsford and Burnaby are projected as follows: Vancouver: 21.0 percent (from 17,290 in 1989 to 20,850 in 1995 and a further 3.0 percent to 21,440 in 2000); Central Okanagan: 56.0 percent (from 3,280 in 1989 to 5,120 in 1995 and a further 35.0 percent to 6,930 in 2000); Abbotsford: 67.0 percent (from 1,930 in 1989 to 3,220 in 1995 and a further 48.0 percent to 4,780 in 2000); and Burnaby: 36.0 percent (from 4,530 in 1989 to 6,140 in 1995 and a further 19.0 percent to 7,330 in 2000).

In the Lower Fraser Valley as a whole, the number of elderly seniors will probably increase from 8,470 in 1989 to 13,530 in 1995 and 19,220 in 2000.

Table 5
REGIONAL CHANGES IN 80+ POPULATION

LHA				CHANGE	
	1989	1995	2000	1989 TO 1995	1995 TO 2000
SURREY	4,350	6,820	9,590	2,470	2,770
Gr. VICTORIA	10,850	13,210	15,290	2,360	2,080
VANCOUVER	17,290	20,850	21,440	3,560	590
CEN. OKANAGAN	3,280	5,120	6,930	1,840	1,810
ABBOTSFORD	1,930	3,220	4,780	1,290	1,560
BURNABY	4,530	6,140	7,330	1,610	1,190

h) Regional Totals

Over the short term 1989-1995, population in many areas of the province will increase in excess of 20.0 percent, compared to a 13.0 percent growth at the provincial level. As shown in Figure 12, both in absolute and percentage terms, population changes in the Lower Fraser Valley and in particular in Surrey, will be crucial to health care planning. Surrey's population is forecast to increase by 65,960 (29.0 percent) from 228,680 in 1989 to 294,640 in 1995. In the Lower Fraser Valley as a whole, the population is expected to increase by 125,130 (28.5 percent) from 438,710 in 1989 to 563,600 in 1995. Increases in other areas are forecast as: Coquitlam +21.0 percent (from 129,200 in 1989 to 156,470 in 1995), Vancouver +10.0 percent (from 456,080 in 1989 to 500,200 in 1995), Central Okanagan +16.0 percent (from 97,770 in 1989 to 113,120 in 1995) and Richmond +14.0 percent (from 117,680 in 1989 to 134,000 in 1995). Lake Cowichan, Kimberley and Revelstoke are expected to experience declines in population.

Over the 1989 - 2000 period, patterns similar to the short term trend, are forecast to emerge. The Lower Fraser Valley is expected to be the fastest growing area in the province and the majority of the population growth in the Lower Fraser Valley is projected to occur in Surrey. On the other hand, Revelstoke, Kimberley and Lake Cowichan are expected to continue to lose population to other regions.

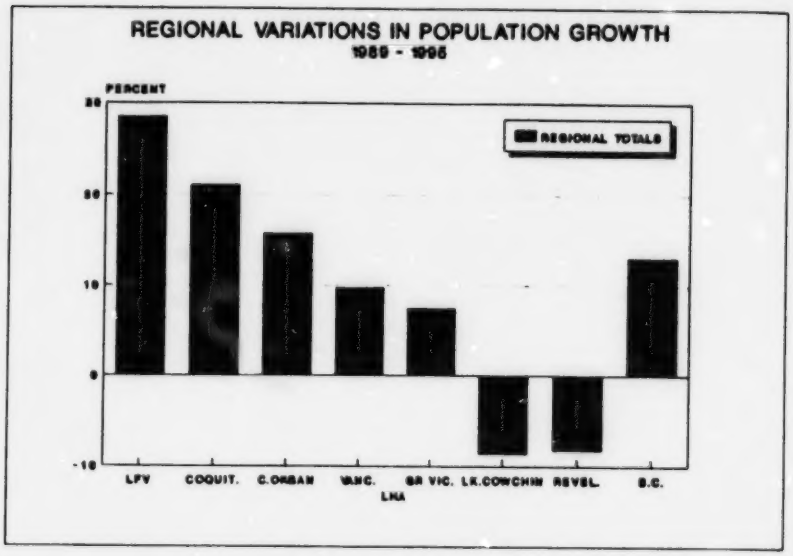
FIGURE 12



4.0 IMPACT ON HEALTH CARE DELIVERY

The projected structural and distributional changes in British Columbia's population will significantly impact some Ministry of Health programs. To illustrate this, the staff of Policy, Planning and Legislation and Hospital Programs jointly examined the impact of these changes on the demand for paediatric, maternity, adult and surgical beds in hospitals. Results indicated that based on projected disease incidence rates and occupancy rates, the demand for the total number of hospital beds in British Columbia will marginally increase by 1995.[4] Currently, British Columbia hospitals have a total 11,439 beds[5]; of that, 9,451 are classified as adult and surgical, 1,025 paediatric and 963 maternity beds. By 1995, demand for paediatric and maternity beds is forecast to drop to 738 and 805 respectively. The demand for adult and surgical beds, however, is projected to increase by 466 to 9,917. In aggregate, the demand in 1995 is expected to be for approximately 11,460 hospital beds.

Even by 2000, the aggregate demand for paediatric and maternity beds is forecast to remain below the current levels. The demand for adult and surgical beds is projected to increase to 11,150. In total, British Columbia will need 1,317 additional hospital beds by 2000.

---

4 Projected rates used in this calculation are for 1997.

5 As of March 31, 1990. Also, this number does not include 428 beds in five free standing Rehabilitation facilities in the province.

From the regional perspective, Surrey Memorial and Peace Arch District hospitals are expected to need 69 additional beds in 1995; Langley Memorial and Abbotsford hospitals will likely require 47 and 88 additional beds respectively; and an additional demand for 51 beds in Maple Ridge hospital is forecast by 1995.

The growth in seniors population induced, in part, by structural shifts will create significant demand for specialists' services relating to geriatric and psycho-geriatric care. Relatively, more resources will be required to provide institutional care and home support services to the aging population. Resources will be required to provide a continuum of services to the seniors population. The Pharmacare program of the Ministry will experience significant cost escalations. For example, based on current utilization patterns, the cost of providing coverage under Plan A could be in the order of $260 million in 1995 compared to $114.0 million in 1989.

Regional variation in birth rates and child population will affect the delivery of certain specialized services such as paediatrics, obstetrics and gynecology, and public health. Unless appropriate polices are implemented to address these regional disparities, certain areas will have limited capability to accommodate the increased demand; while other areas will probably be faced with the surplus resources.
